

You can control house lighting directly from your home-office PC with a wireless modular control system. This USB stick from HomeSettings by Intermatic loads software on the computer and controls lighting modules.

Home-office workstations provide an efficient, compact solution for organizing most common computer hardware. Shelves, keyboard pullouts and wiring chases help to reduce clutter and improve ergonomics.

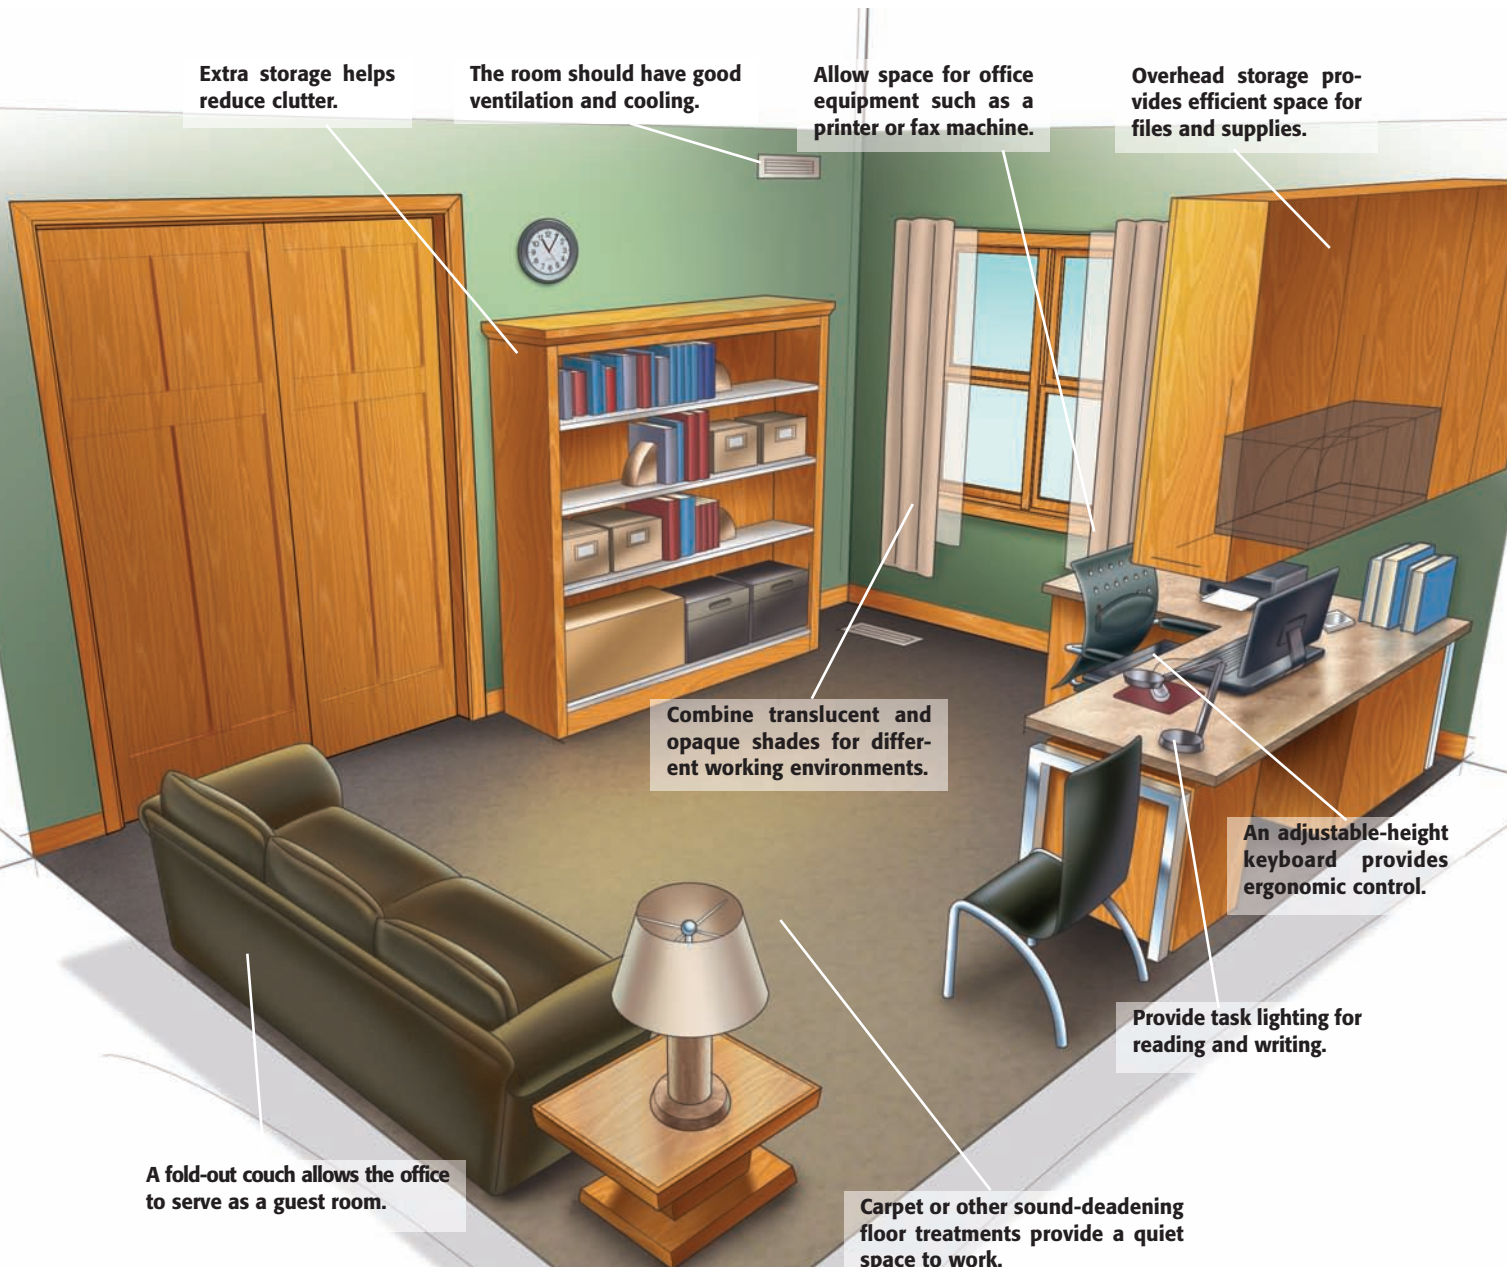

To prevent eyestrain caused by harsh lighting, these translucent Roman shades from Levolor diffuse outside light and create a more pleasing soft light. You could add a layer of opaque curtains to completely block light if needed.

Extra storage helps reduce clutter.

The room should have good ventilation and cooling.

Allow space for office equipment such as a printer or fax machine.

Overhead storage provides efficient space for files and supplies.

Combine translucent and opaque shades for different working environments.

An adjustable-height keyboard provides ergonomic control.

Provide task lighting for reading and writing.

A fold-out couch allows the office to serve as a guest room.

Carpet or other sound-deadening floor treatments provide a quiet space to work.
